Lazarsfeld's latent structure analysis is used on the latent class model with dichotomized questions. This mathematical model is based on the following postulate: Within a homogeneous latent class the answers to the different questions are independent and the frequency of positive answers to each question is close to the latent probability. The statistical procedure involved calls for matrix analysis and the general mach-

DESCRIPTORS: *Cotton textiles, Fibers, *Bleaching agents, Transition temperature, Heat of reaction.

The laboratory conditions for bleaching at temperatures of above 100°C are mentioned. In addition to an investigation of the stability of hydrogen peroxide solutions, there is an evaluation of the degree of whiteness and the husk retention in function of the degree of stabilization. The first technology proposals are made which can be applied in pilot plant experiments. (Author)
